

## Construction Update June 19th

### **New playground incoming!**

Progress continues on the Presidential Park reconstruction project. Last week, the contractor began installation of the new playground equipment! We look forward to community members getting to enjoy these improvements later this year.

---

Recently, the contractor also completed the CMU (concrete masonry unit) walls for the new park bathroom facilities and began work on the other new park building. CMU walls are durable and resistant to a wide range of environmental conditions, including fire and impact damage.

Next week, the contractor will complete the installation of interior and exterior CMU walls.

They will also begin placing topsoil throughout the park and installing underdrain in the proposed challenge course area. Underdrains are a drainage feature that is installed underground to collect subsurface water and transport it to designated on-site drainage basins to prevent flooding.

*CMU wall installation*

*Proposed challenge course*
